2 . * =====
3 . * ROBUSTNESS CHECKS FOR STATISTICAL RESULTS APPEARING IN CHAPTER 4
4 . * STATA
5 . * Robustness checks for results reported in Chapter 4
6 . * Author: Mark R. Beissinger
7 . * Date: January 2022
8 . * Princeton, NJ
9 . * =====
10 . * BEFORE RUNNING, YOU MUST SET THE DEFAULT PATH FOR WHERE THE DATA
11 . * FILES RESIDE
12 . * =====
13 . * The following datafiles are used in this file:
14 . * Dataset of revolutionary episodes--revolutionaryeps.dta
15 . * Multiple imputation dataset for revolutionary episodes (regime variables)--
16 . *     revolutionaryepsmireg.dta
17 . * Multiple imputation dataset for revolutionary episodes (opposition variables)--
18 . *     revolutionaryepsmiopp.dta
19 . * Multiple imputation dataset for revolutionary episodes (combined model)--
20 . *     revolutionaryepsmicomb.dta
21 . * =====
22 . * Before running, you must download the following packages for STATA:
23 . * checkrob from http://fmwww.bc.edu/RePEc/bocode/c
24 . * collin from https://stats.oarc.ucla.edu/stata/ado/analysis/
25 . * eststo and esttab from http://www.stata-journal.com/software/sj7-2
26 . * =====
27 . * The following output is produced by these robustness tests:
28 . *     Robustnesstestfiles\Logfiles\robustnesstestschapter4.log
29 . *
30 . * The following graphs are produced by these robustness tests:
31 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat1.pdf
32 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat2.pdf
33 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat3.pdf
34 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat4.pdf
35 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat5.pdf
36 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat6.pdf
37 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat7.pdf
38 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat8.pdf
39 . *     Robustnesstestfiles\Logfiles\robch4tab4_1_scat9.pdf
40 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat1.pdf
41 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat2.pdf
42 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat3.pdf
43 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat4.pdf
44 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat5.pdf
45 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat6.pdf
46 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat7.pdf
47 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat8.pdf
48 . *     Robustnesstestfiles\Logfiles\robch4tab4_2_scat9.pdf
49 . *     Robustnesstestfiles\Logfiles\robch4tab4_3_scat1.pdf
50 . *     Robustnesstestfiles\Logfiles\robch4tab4_3_scat2.pdf
51 . *     Robustnesstestfiles\Logfiles\robch4tab4_3_scat3.pdf
52 . *     Robustnesstestfiles\Logfiles\robch4tab4_3_scat4.pdf

73 . * ROBUSTNESS TESTS FOR MODELS 6 & 9 IN TABLE 4.1--REGIME MODEL
74 . * =====
75 .
76 . * ++++++
77 . * Testing robustness of the specification to inclusion or exclusion of variables
78 . * ++++++

```

```

79 . * *****
80 . * PLEASE READ
81 . * *****
82 . * The checkrob procedure checks all possible combinations of variables and tests
83 . * if signs are stable and whether z-statistics for Beta/S.E. of Beta are >1.96
84 . * (i.e., .05 level of significance) or >1.65 and <1.96 (i.e., .10 level of
85 . * significance).
86 . * All z-statistics were calculated in Excel from the comma-separated tables
87 . * produced from the output of checkrob.
88 . * BEWARE: There is a glitch in the checkrob procedure involving quadratic
89 . * specifications. In the tables produced by the procedure, the results for
90 . * the first variable of a quadratic specification sometimes falsely
91 . * include results from the squared variable. ONE MUST VISUALLY INSPECT
92 . * AND, IF PRESENT, HAND-CORRECT.
93 . * I HAVE PROVIDED AN EXCEL TABLE WITH RESULTS OF THE TEST BELOW THAT CORRECTS
94 . * FOR THE ABOVE PROBLEM AND CALCULATES THE Z-SCORES (See the Excel file
95 . * checkrob.results.chapter4.xlsx, which contains all results of all checkrob
96 . * tests in this chapter).
97 . * *****
98 . * THE FOLLOWING COMMANDS WERE USED TO CREATE THE EXCEL TABLE.
99 . * DO NOT RUN THESE COMMANDS UNLESS YOU INTEND TO RECONFIGURE THE OUTPUT
100 . * TO CORRECT FOR THE ABOVE GLITCH AND TO CALCULATE THE Z-SCORES BY HAND.
101 . * *****
102 . * Recreate common sample for complete-case sample (Model 9)
103 . * quietly: logit success newpolitymin1 newpolitymin1sq newincumbpowerdur newincumbage newgdppcchl newlnoill n
> ewmleexpold10tile civilwar newcivxmilexp if startyear>1899, or
104 . * generate sample=e(sample)
105 . * Run checkrob command
106 . * checkrob 2 6 ch4tab1mod9.txt: logit success newpolitymin1 newpolitymin1sq newincumbpowerdur newgdppcchl new
> lnoill newmleexpold10tile civilwar newcivxmilexp if startyear>1899 & sample==1, or
107 . * RESULTS:
108 . * Given that the variables for newpolitymin1 and newpolitymin1sq must be together, there are 32 possible c
> ombinations
109 . * (Do note, however, that civilwar, newilexpsold10tile, and newcivxmilexp form an interaction)
110 . * --newpolitymin1 and newpolitymin1sq are significant at .05 level or better in 100% of specifications, wi
> th no sign changes
111 . * --newincumbpowerdur is significant at .05 level in 100% of specifications, with no sign changes
112 . * --newgdppcchl is significant at the .05 level in 37.5%, significant at the .10 level in 6.3%, and insign
> ificant in 56.3% of specifications;
113 . * sign changes: positive in 53.1% (almost all of which are statistically insignificant, with two
> significant at the .10 level) and
114 . * negative in 46.9% (and in most cases, statistically significant at the .05 level)
115 . * newgdppcchl appears interact with some of the other variables in the specification--particularly
> newlnoill and newmleexpold10tile
116 . * --newlnoill is significant at the .05 level in 93.8% of specifications and at the .10 level in 6.3% of s
> pecifications, with no sign changes (consistently negative)
117 . * --when not in interaction, newmleexpold10tile is always significant at the .05 level and positive, no s
> ign changes
118 . * --when not in interaction, civilwar is always statistically significant and negative;
119 . * --in the interaction civilwar x newmleexpold10tile (8 specifications in which they appear together--all
> others are ignored):
120 . * newmleexpold10tile is always significant at the .05 level and positive , no sign changes
121 . * civilwar in the interaction is never statistically significant, but consistently negative
122 . * newcivxmilexp is consistently negative and statistically significant at the .10 level for half o
> f the specifications of interactions and insignificant in 50 percent
123 .
124 . * *****
125 . * Bootstrapped standard errors--1000 replications--complete-case sample
126 . * *****
127 . * logit success newpolitymin1 newpolitymin1sq newincumbpowerdur newgdppcchl newlnoill newmleexpold10tile civilwar

> cept=r(b_int), reps(100) eform : myboot
(running myboot on estimation sample)

```

Warning: Because myboot is not an estimation command or does not set e(sample), bootstrap has no way to determine which observations are used in calculating the statistics and so assumes that all observations are used. This means that no observations will be excluded from the resampling because of missing values or other reasons.

If the assumption is not true, press Break, save the data, and drop the observations that are to be excluded. Be sure that the dataset in memory contains only the relevant data.

```

Warning: Because myboot is not an estimation command or does not set e(sample), bootstrap has no way to determine which observations are used in calculating the statistics and so assumes that all observations are used. This means that no observations will be excluded from the resampling because of missing values or other reasons.

If the assumption is not true, press Break, save the data, and drop the observations that are to be excluded. Be sure that the dataset in memory contains only the relevant data.

> (b_newo) b_newmilexpsold10tile r(b_newm) intercept r(b_int), reps(100): myboot
(running myboot on estimation sample)
```

Warning: Because myboot is not an estimation command or does not set e(sample), bootstrap has no way to determine which observations are used in calculating the statistics and so assumes that all observations are used. This means that no observations will be excluded from the resampling because of missing values or other reasons.

If the assumption is not true, press Break, save the data, and drop the observations that are to be excluded. Be sure that the dataset in memory contains only the relevant data.
